THE ARYSTA LIFESCIENCE PRODUCT PORTFOLIO FOR CORN

At Arysta LifeScience, our goal has always been to bring you products that add true value to your business. Our portfolio for the corn market offers integrated solutions that can help take you successfully from planting to harvest.

Tepera™ Plus

fungicide + insecticide

TEPERA™ PLUS combines fluoxastrobin, a highly systemic and residual fungicide, with the insecticide bifenthrin to defend against damaging soil and seedling pests and diseases. TEPERA PLUS is also the only fungicide plus insecticide premix on the market with a full-rate fungicide for in-furrow use. Patented formulation technology makes it highly compatible with liquid fertilizers, requiring minimal agitation, no dilution and no extra equipment.

Tepera™

fungicide

A highly systemic and residual strobilurin for in-furrow control of seedling and soil-borne diseases. Patented formulation technology makes it highly compatible with liquid fertilizers requiring minimal agitation, no dilution and no extra equipment.

Fortix®

fungicide

A highly systemic, fast-acting strobilurin combined with the longest-lasting triazole for season-long fungicide benefits with one early application and total application flexibility – apply by ground or by air.

Zolera® FX

fungicide

A heavy-duty combination fungicide with two active ingredients delivered at full rates for maximum performance and yield in corn. Preventative and curative activity, with residual soil activity for root-to-tip protection. For maximum yield benefits, apply at VT.

Comite® II

miticide

Proven protection against destructive mites in corn with contact and residual activity up to four weeks at full label rates. Easy on beneficial insects.

Application Rates and Timing
