

# Shadow™ Herbicide

The no-hassle herbicide

## The post-emergent solution for controlling Roundup Ready® volunteer corn in soybeans.

SHADOW™ Herbicide is the proven, post-emergent herbicide for selective control of Roundup Ready® volunteer corn in Roundup Ready® soybeans. The active ingredient in SHADOW™ is 'Clethodim,' which provides effective control of yield-robbing grasses in many broadleaf and vegetable crops to deliver higher yields and better net returns. With a wide application window and tank-mix flexibility, SHADOW is easy to use, and is the ideal herbicide for volunteer corn and cereal control in Roundup Ready soybean, cotton, alfalfa and sugar beet crops.

- Tank-mixable with glyphosate in Roundup Ready crops
- An ideal solution for Roundup Ready volunteer corn in soybeans
- The genuine Clethodim that growers have come to trust over the past 10 years
- Made in the USA
- Quality formulation
- Proven performance
- Wide window of application for easy timing
- Freedom of choice "without rebate/bundle hassle"

## Count on SHADOW for grass control in these valuable broadleaf crops.

- Alfalfa
- Beans
- Canola
- Cotton
- Flax
- Onions
- Peanuts
- Potatoes
- Sugar beets
- Soybeans
- Sunflowers

## SHADOW controls these tough grassy weeds, and more.

- Barnyardgrass
- Fall panicum
- Green foxtail
- Large crabgrass
- Proso millet
- Smooth crabgrass
- Volunteer barley
- Volunteer corn
- Volunteer oats
- Volunteer wheat
- Wild oats
- Witchgrass
- Yellow foxtail

## One-shot control of Roundup Ready volunteer corn and other weeds.

Roundup Ready volunteer corn can be difficult to control in soybeans. But, when you tank-mix SHADOW with Roundup® brands, or other glyphosate products, you get excellent control of Roundup Ready volunteer corn in your Roundup Ready soybeans in addition to the other weeds listed on the SHADOW label.

# Shadow™ Herbicide

The no-hassle herbicide

## Easy application and excellent crop safety.

SHADOW has a wide application window for flexible spray timing and control of a wide range of weed stages. Add in excellent crop safety and SHADOW is the grassy weed herbicide of choice for broadleaf and vegetable crops. Post-emergent applications should be made to actively growing grasses based on recommended labeled rates. Consult the label for tank-mixes with several other fungicides, insecticides and crop nutrients.

## Adjuvants.

A crop oil concentrate, methylated seed oil, or non-ionic surfactant must be used with SHADOW, in addition to UAN/AMS depending on target crop.

General adjuvant recommendations for most field crops: Apply 1 qt/A of crop oil concentrate or 1%v/v. Do not use less than 1 pint of oil per acre. 1 – 2 quarts of UAN or 2.5 – 4 lbs of AMS may be added to improve control of difficult grass species.

Conveniently packaged in 2 X 2 ½ gallon jugs.

This year, ask your retailer for genuine SHADOW Herbicide from Arysta LifeScience North America. To learn more, visit [www.arystalifescience.us/shadow](http://www.arystalifescience.us/shadow) or call 1-866-761-9397 toll free.
